

Panelling Batten

Panelling Mechanical Fixing System

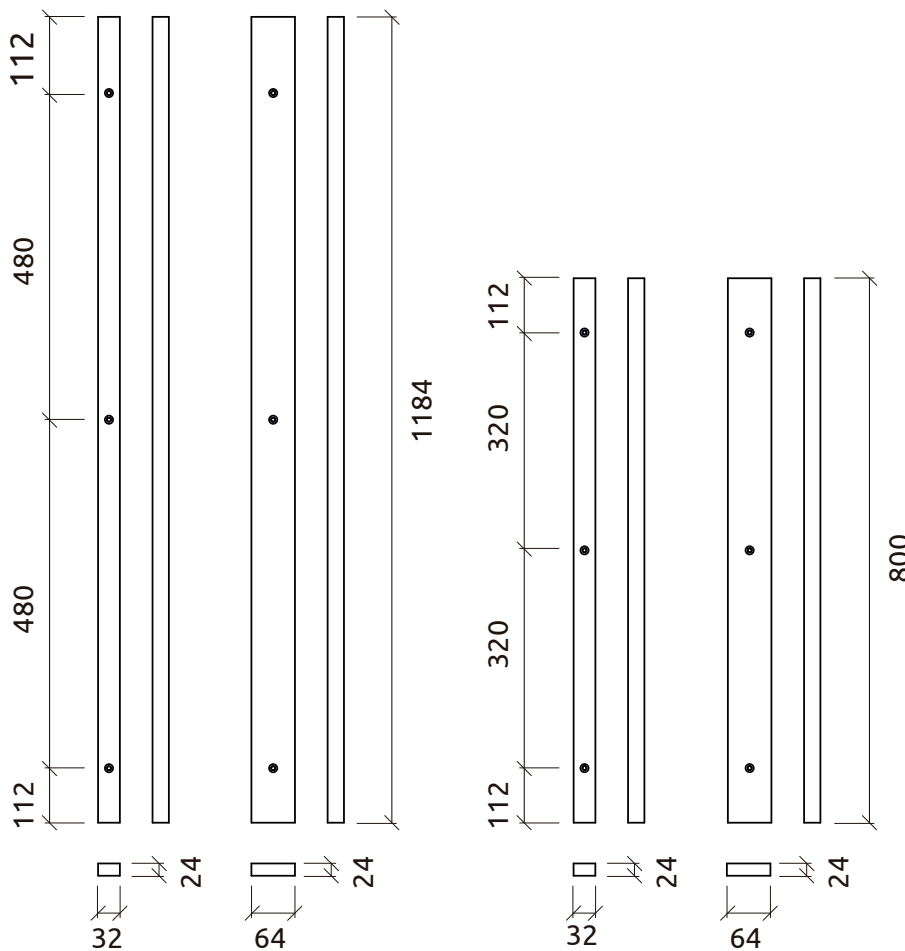

A simple installation system for the entire panelling range. These batons are dimensioned for either vertical or horizontal installation layouts, whichever is more suited to your space.

The battens can be installed on any surface. They are equipped with pre-drilled holes at appropriate intervals to aid installation. The battens can further be painted or sealed on site.

To install panelling, simply screw the panel in place, through the available holes or slats, into the battens beneath.

Technical Information

Specifications
